### Date

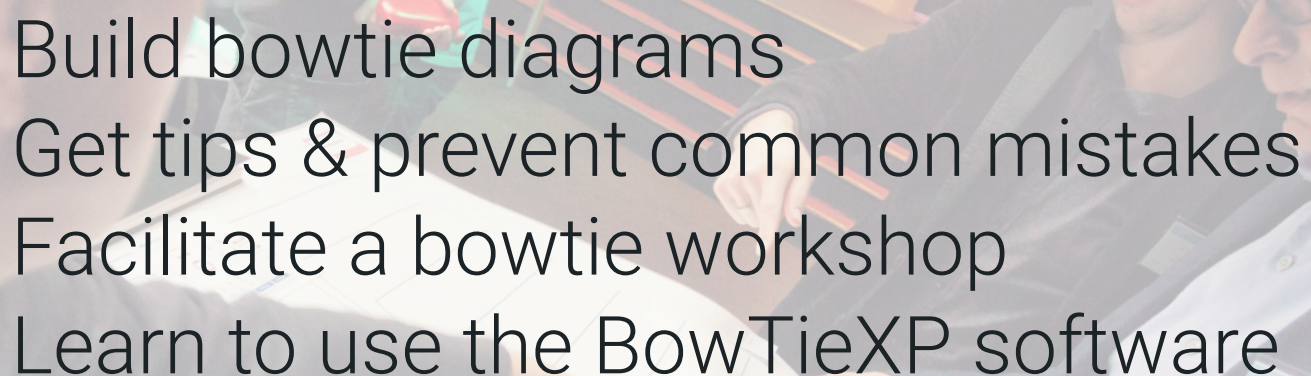

7-8 November 2019  
Thursday, Friday.

### Location

Vlietweg 17v,  
Leidschendam

### Cost

€1100,- or €1000,- if you  
register before October 7

Build bowtie diagrams  
Get tips & prevent common mistakes  
Facilitate a bowtie workshop  
Learn to use the BowTieXP software

### Course description

In this practical 2 day course you will learn how to do risk analysis using the bowtie method. A thorough explanation of the method will be combined with hands-on exercises. We will use the Bowtie Toolkit to do bowtie workshops in groups, as well as build diagrams using the BowTieXP software.

### Trainer profile

Jasper Smit has been providing well-received training courses in barrier-based methods over the last 6 years. These include bowtie and incident analysis. During his time at CGE Risk Management Solutions, he has facilitated the implementation of barrierbased risk management systems at various organizations. Jasper holds a Master's degree in Cognitive Psychology.

# Program

## Day 1

Morning - Introduction to the bowtie method and BowTieXP software

Afternoon - Build your first bowtie diagram

## Day 2

Morning - Run a bowtie workshop with the Bowtie Toolkit

Afternoon - BowTieXP advanced features & applying bowties in production

## What is a bowtie?

Bowties are visual risk assessment diagrams. They give a graphical summary of how major risks are controlled. They are intuitive to use and help give answers to questions like: which barriers do we have in place and who is responsible for them? What do we do to maintain these barriers and which documentation do we have to support this?

## Why bowties?

- ▶ Bowties make risk communication easy
- ▶ Bowties help you make risk based decisions
- ▶ Bowties will get more value out of a risk assessment
- ▶ Bowties can visualise the performance of your safety barriers
